## ABSTRACT

This report on the Bering Sea/Aleutian Islands pollock midwater trawl fishery is one of a six part series of reports summarizing catch per unit effort (CPUE) and bycatch data extracted from the National Marine Fisheries Service Observer Program North Pacific (NORPAC) database. Other reports cover the other flatfish, yellowfin sole, pollock (bottom), Pacific cod, and miscellaneous species fisheries. The overall goal of this project is to help individual skippers and vessel owners maintain their bycatch rates for prohibited species (halibut, herring, red king crab, and bairdi Tanner crab) within guidelines established by the North Pacific Fishery Management Council. Data from the period 1981-1989 are summarized by month, year, and geographic location (one-half-by-one-degree latitude/longitude blocks). Five 12-month series of charts are presented, each of which shows the Bering Sea/Aleutian Islands region divided into one-half-by-one degree latitude/longitude blocks on which bar graphs illustrating average CPUEs or bycatch rates are superimposed. These chart series provide a visual overview of the data through time and space. Other sections list the actual numerical data associated with each bar graph and provide tables summarizing the data by month and year. Tables listing the Month/Block/Year records with the highest CPUEs and bycatch rates also are provided.

## Introduction

In December 1990 the North Pacific Fishery Management Council (NPFMC) adopted a Bycatch Incentive Program to reduce the bycatch of Pacific halibut (*Hippoglossus stenolepis*), Pacific herring (*Clupea harengus pallasi*), red king crab (*Paralithodes camtschatica*), and bairdi Tanner crab (*Chionoecetes bairdi*) during the 1991 season. Under this program, bycatch rate "standards will be published at least twice annually by National Marine Fisheries Service, and more often as warranted by fleet performance data. Vessels whose bycatch rates exceed the [NMFS] standards will be subject to prosecution and civil penalties, most likely after the season".<sup>1</sup>

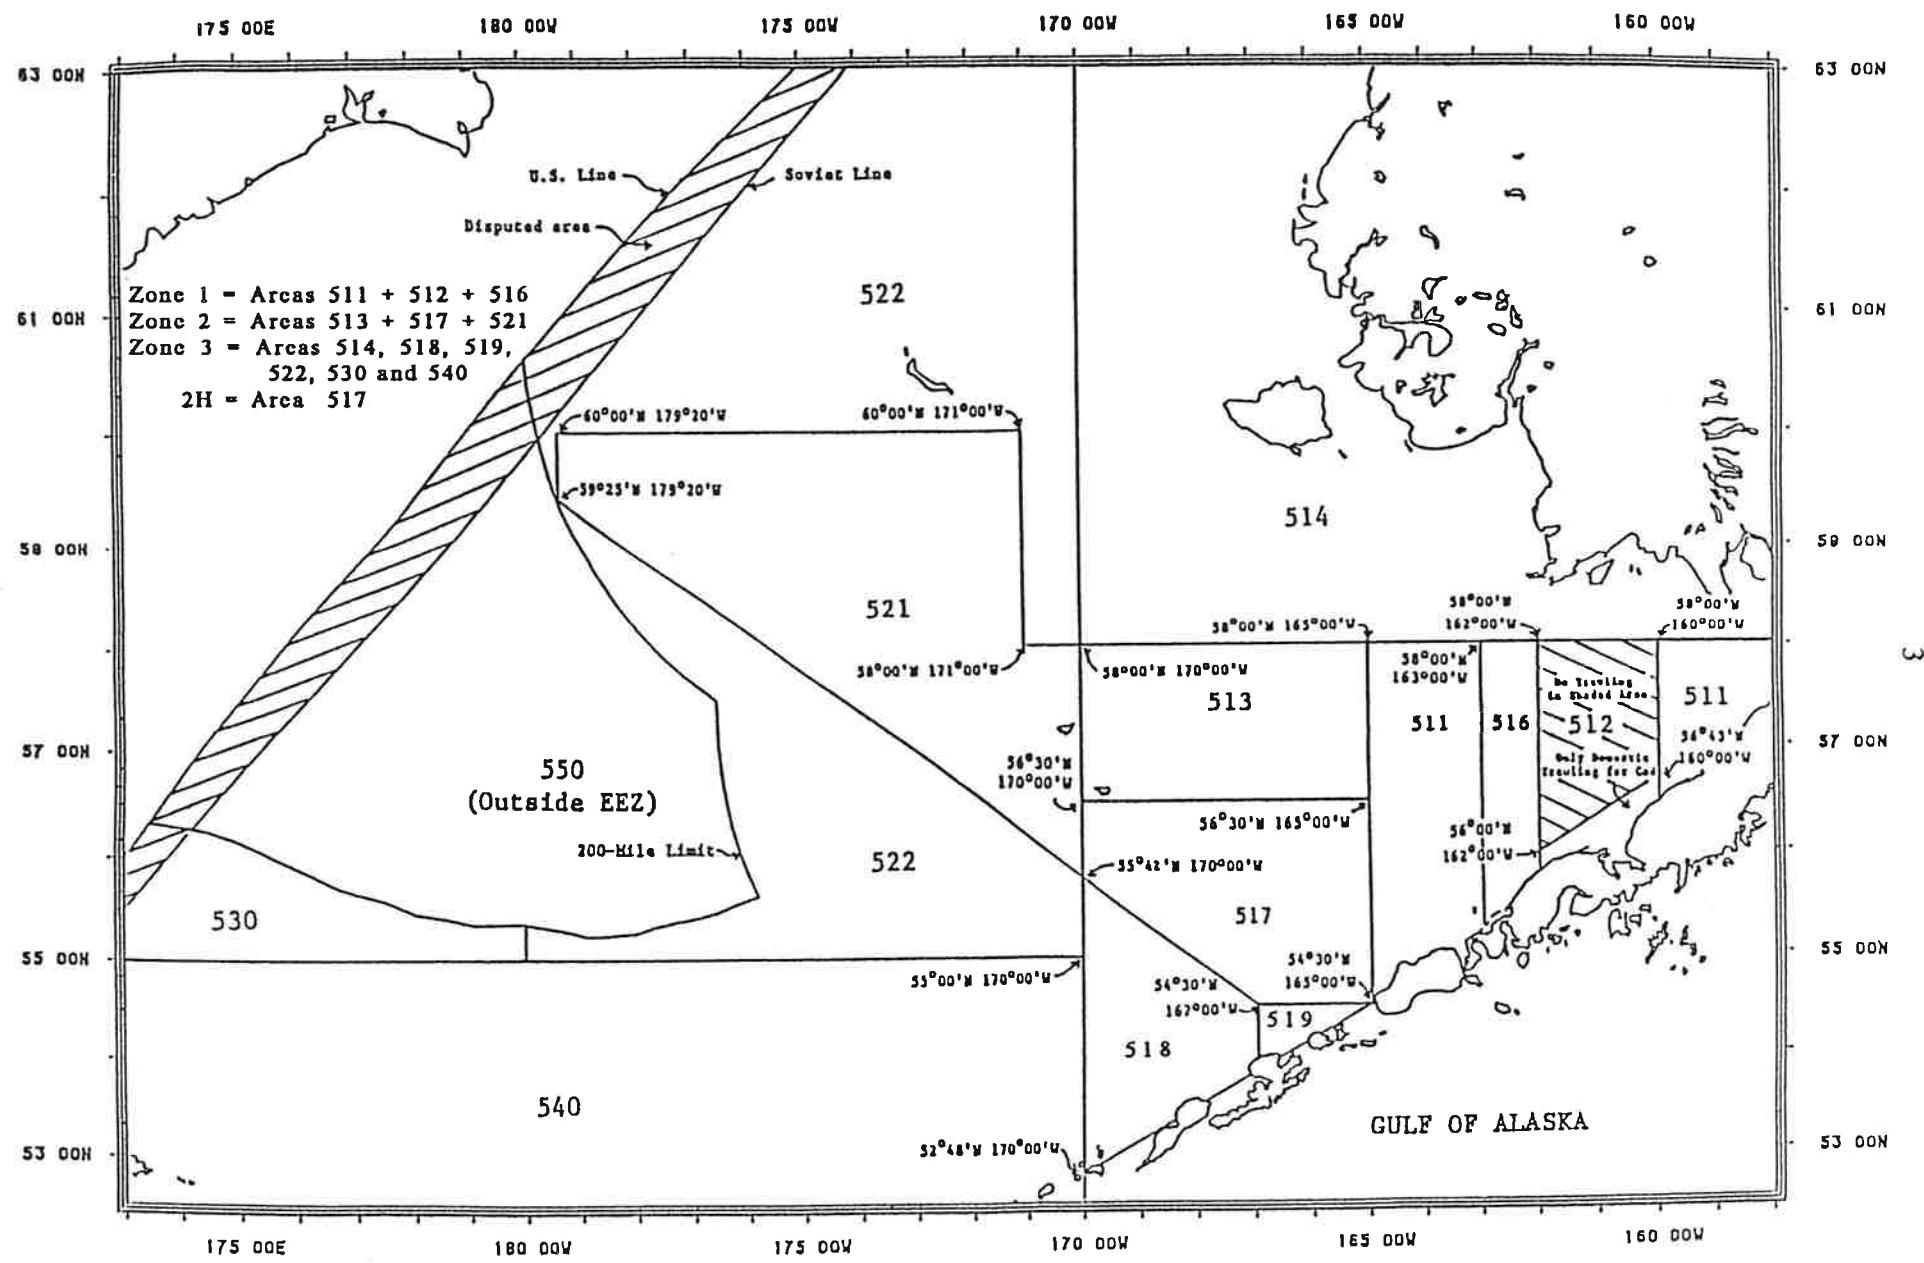

The National Marine Fisheries Service Observer Program has been collecting catch and bycatch data from foreign, joint venture, and domestic groundfish fisheries for many years. Berger (1988) summarized bycatch data from the joint venture groundfish fishery in the Bering Sea and Aleutian Islands (BSAI) area for the period 1986-1988 by target fishery, quarter of the year, and management area.<sup>2</sup> Current management areas in the BSAI area are shown in Figure 1. In November 1990 industry representatives expressed a desire for a more comprehensive summary of the data that would: (1) cover more years; (2) give monthly rather than quarterly rates; (3) give rates in one-half-by-one degree latitude/longitude blocks rather than by management area; and (4) present the data in a more user-friendly manner. This report summarizes Observer Program data on the BSAI walleye pollock (*Theragra chalcogramma*) midwater trawl fishery and is one of a six part series of reports designed to satisfy industry's request. Other reports cover the following fisheries: other flatfish (including rock sole, *Lepidopsetta bilineata*), yellowfin sole (*Limanda aspera*), walleye pollock (bottom), Pacific cod (*Gadus macrocephalus*), and miscellaneous species (all others). The overall goal of this project is to help individual skippers and vessel owners maintain their bycatch rates of prohibited species within current or future NPFMC guidelines.

<sup>1</sup> North Pacific Fishery Management Council Newsletter dated December 13, 1990.

<sup>2</sup> Berger, J. D. 1988. By-catch rates in the Bering Sea and Aleutian Islands Joint Venture Groundfish Fishery, 1986-88. U.S. Dep. Commer., NOAA Technical Memorandum NMFS F/NWC-155, 137 p.

This report consists of eight sections. Section I describes the methods used to prepare the tables and charts. Section II provides 17 tables giving a broad overview of the data. Sections III through VII each present a 12-month series of charts of the BSAI area divided into one-half-by-one degree latitude/longitude blocks on which bar graphs illustrating average annual catches per unit effort (CPUEs) (Section III) or bycatch rates (Sections IV through VII) for the period 1981-1989 are superimposed. Section VIII consists of 12 data tables (one for each month) listing the numerical data associated with each bar graph.

**Figure 1.** North Pacific Fishery Management Council management areas in the Bering Sea/Aleutian Islands region.

## **SECTION I**

## **METHODS**

## Section I

### Methods

#### **Data Extraction**

NMFS staff extracted data from the North Pacific (NORPAC) database for use in preparing the tables and charts presented in Sections II - VIII. NORPAC data are formatted on a tow-by-tow basis. Data from each observed tow include the following: date, location, estimated finfish catch in weight by species, king and Tanner crab catch in numbers, and minutes towed. For joint venture (JV) fisheries in 1986 and 1987, king and Tanner crab data are itemized into red king crab and bairdi Tanner crab, respectively. Crab data by species have been collected for other years, but have not yet been incorporated into the NORPAC database.

Date and location data were used to categorize each tow into a Month/Block/Year record. Blocks were coded with a six digit number in which the first and last three digits identify the longitude and latitude of the southeast corner of the block, respectively. For example, the block code 165553 identifies all tows made within the block whose southeast corner lies at 165:00 West longitude and 55:30 North latitude. Blocks lying west of 180:00 longitude (i.e., those identified by East longitude) were given longitude codes appropriately greater than 180. For example, the block code 185540 identified all tows made within the block whose southeast corner lies at 175:00 East longitude and 54:00 North latitude.

Each tow was further categorized into a directed fishery using the following criteria:

<u>Directed Fishery Name</u>	<u>Criteria (% of total catch)</u>
1. Pollock (Midwater)	Walleye Pollock > 95%
2. Other Flatfish	Other Flatfish (including rock sole) > 35%
3. Pacific Cod	Pacific Cod > 45%
4. Pollock (Bottom)	Walleye Pollock > 50%
5. Yellowfin Sole	Yellowfin Sole > 20%
6. Miscellaneous Species	None of the above.

Target fisheries were prioritized as above and were mutually exclusive. That is, tows that satisfied more than one criteria (e.g., Other Flatfish > 35% and Pacific Cod > 45%) were placed in the directed fishery with greatest priority (Other Flatfish in this example). A summary

database was created by summing catches (total including prohibited species, target species, halibut, herring, king crab, Tanner crab), minutes towed, and number of tows over each Month/Block/Year/Target record. The summary database, along with shoreline and bathymetric map data, was downloaded from the NMFS mainframe computer onto floppy disks and supplied to Marine Resources Consultants for analysis and graphics presentation.

### Data Analysis

All records in which Pollock (Midwater) was the directed fishery were extracted from the summary database and sorted by month, block, and year. The following variables were calculated for each Month/Block/Year record:

$$\begin{aligned}
 \text{Total CPUE (mt/hr)} &= \frac{\text{Total Catch (mt)}}{\text{Towing Time (hr)}} \\
 \text{Total CPUE (mt/tow)} &= \frac{\text{Total Catch (mt)}}{\text{Number of Tows}} \\
 \text{Target Percentage} &= \frac{\text{Pollock Catch (mt)}}{\text{Total Catch (mt)}} * 100 \\
 \text{Halibut Bycatch Rate (\%)} &= \frac{\text{Halibut Catch (mt)}}{\text{Total Catch (mt)}} * 100 \\
 \text{Herring Bycatch Rate (\%)} &= \frac{\text{Herring Catch (mt)}}{\text{Total Catch (mt)}} * 100 \\
 \text{King Crab Bycatch Rate} &= \frac{\text{King Crab Catch (animals)}}{\text{Total Catch (mt)}} \\
 \text{Tanner Crab Bycatch Rate} &= \frac{\text{Tanner Crab Catch (animals)}}{\text{Total Catch (mt)}}
 \end{aligned}$$

where

Total Catch = Total catch, including prohibited species.

CPUEs measured in terms of metric tons per hour of towing were not calculated for records in which effort data were not accurately recorded (e.g., minutes towed was less than or equal to the number of tows) or were unrealistic (e.g., minutes per tow was greater than 480). Also,

CPUEs measured in terms of metric tons per tow were not calculated for records with fewer than five tows to prevent readers from back-calculating the exact number of tows for that record.

Bycatch rates for red king crab and bairdi Tanner crab were not calculated. Since only a limited amount of red king crab and bairdi Tanner crab data were available (JV fishery in 1986-1987) and to maintain consistency from year to year, we decided to present only the king and Tanner crab data without itemization by species. King crab species include red, blue (*Paralithodes platypus*), golden (*Lithodes aequispina*), and couesi (*Lithodes couesi*).

### Summary Tables

Tables II.1 through II.9 summarize total observed catch, number of observed tows, CPUEs, bycatch rates, and pollock percentage by month and year. CPUEs were calculated by dividing total catches (summed over each Month/Year) by towing times (summed over each Month/Year). Bycatch rates were calculated by dividing total bycatches (summed over each Month/Year) by total catches (summed over each Month/Year). Pollock percentages were calculated by dividing total pollock catches (summed over each Month/Year) by total catches (summed over each Month/Year).

Tables II.10 through II.17 list the Month/Block/Year records with the highest observed catch, number of observed tows, CPUEs, and bycatch rates for each prohibited species.

Each summary table has a date/time stamp at the bottom center to indicate the date and time the table was printed.

### CPUE and Bycatch Rate Charts

The number of records in each one-half-by-one degree block was plotted on a chart to determine the geographic distribution of the data. Most of the data were concentrated along the continental shelf and in the Amchitka Pass and Seguam Pass regions. The entire range was too large to fit as a single chart on two 8.5" x 11" facing pages and still permit enough room to place annual bar graphs within individual blocks. Thus, we divided the geographic distribution into four display regions: West Bering Sea, East Bering Sea, Seguam Pass, and Amchitka Pass. Records located outside these regions are not displayed on the CPUE and bycatch rate charts in Sections III through VII. They are listed in the data tables in Section VIII, however.

Histograms of the CPUEs and bycatch rates were prepared to determine appropriate bar graph scales for each variable. Linear scales were selected such that about 10% of the bars would be too long to fit within a block. The bar graphs for these offscale records end in an arrow; the actual numerical values associated with these bars can be found in the data tables in Section VIII.

Figures I.1 and I.2 illustrate how to interpret the CPUE and bycatch rate charts. Each chart contains a page identifier indicating the month in which the observations were made, the target species (e.g., Pollock (Midwater)), and the information represented by bar graphs (e.g., CPUEs, halibut bycatch rate, etc.). A legend near the top of each chart provides pertinent information about how to interpret the chart. CPUEs are presented as bar graphs in which the total bar length reflects total CPUE and the filled portion represents the pollock CPUE. Bar graphs for prohibited species bycatch rates are filled throughout. Scales are provided on each chart for converting bar graph lengths to approximate numerical values. A narrow bar indicates that fewer than five tows were observed; a wide bar indicates that five or more tows were observed. Land masses are represented by shaded areas. Bathymetric contour lines are given for the 200 meter (about 110 fathoms) and 1,000 meter (about 550 fathoms) contours. A date/time stamp is printed near the binding edge to indicate the date and time the chart was printed. Note that this date/time is different from the date and time when the data were retrieved from the NORPAC database.

#### Data Tables

The data used to prepare the charts in Sections III - VII are listed by month in Section VIII. To preserve the confidentiality of the data, the exact number of tows is not reported for records with fewer than five tows. Records that were located outside the geographic boundaries of the charts are shown in ***bold italics***. A date/time stamp is given at the bottom of each table to indicate the date and time the table was printed.

85 ——— 1985 Bycatch Rate Offscale (Pointed End). Five or More Tows.  
87 ——— 1987 Bycatch Rate Zero.

NOTE: Consult data tables (Section VIII) to determine offscale values.

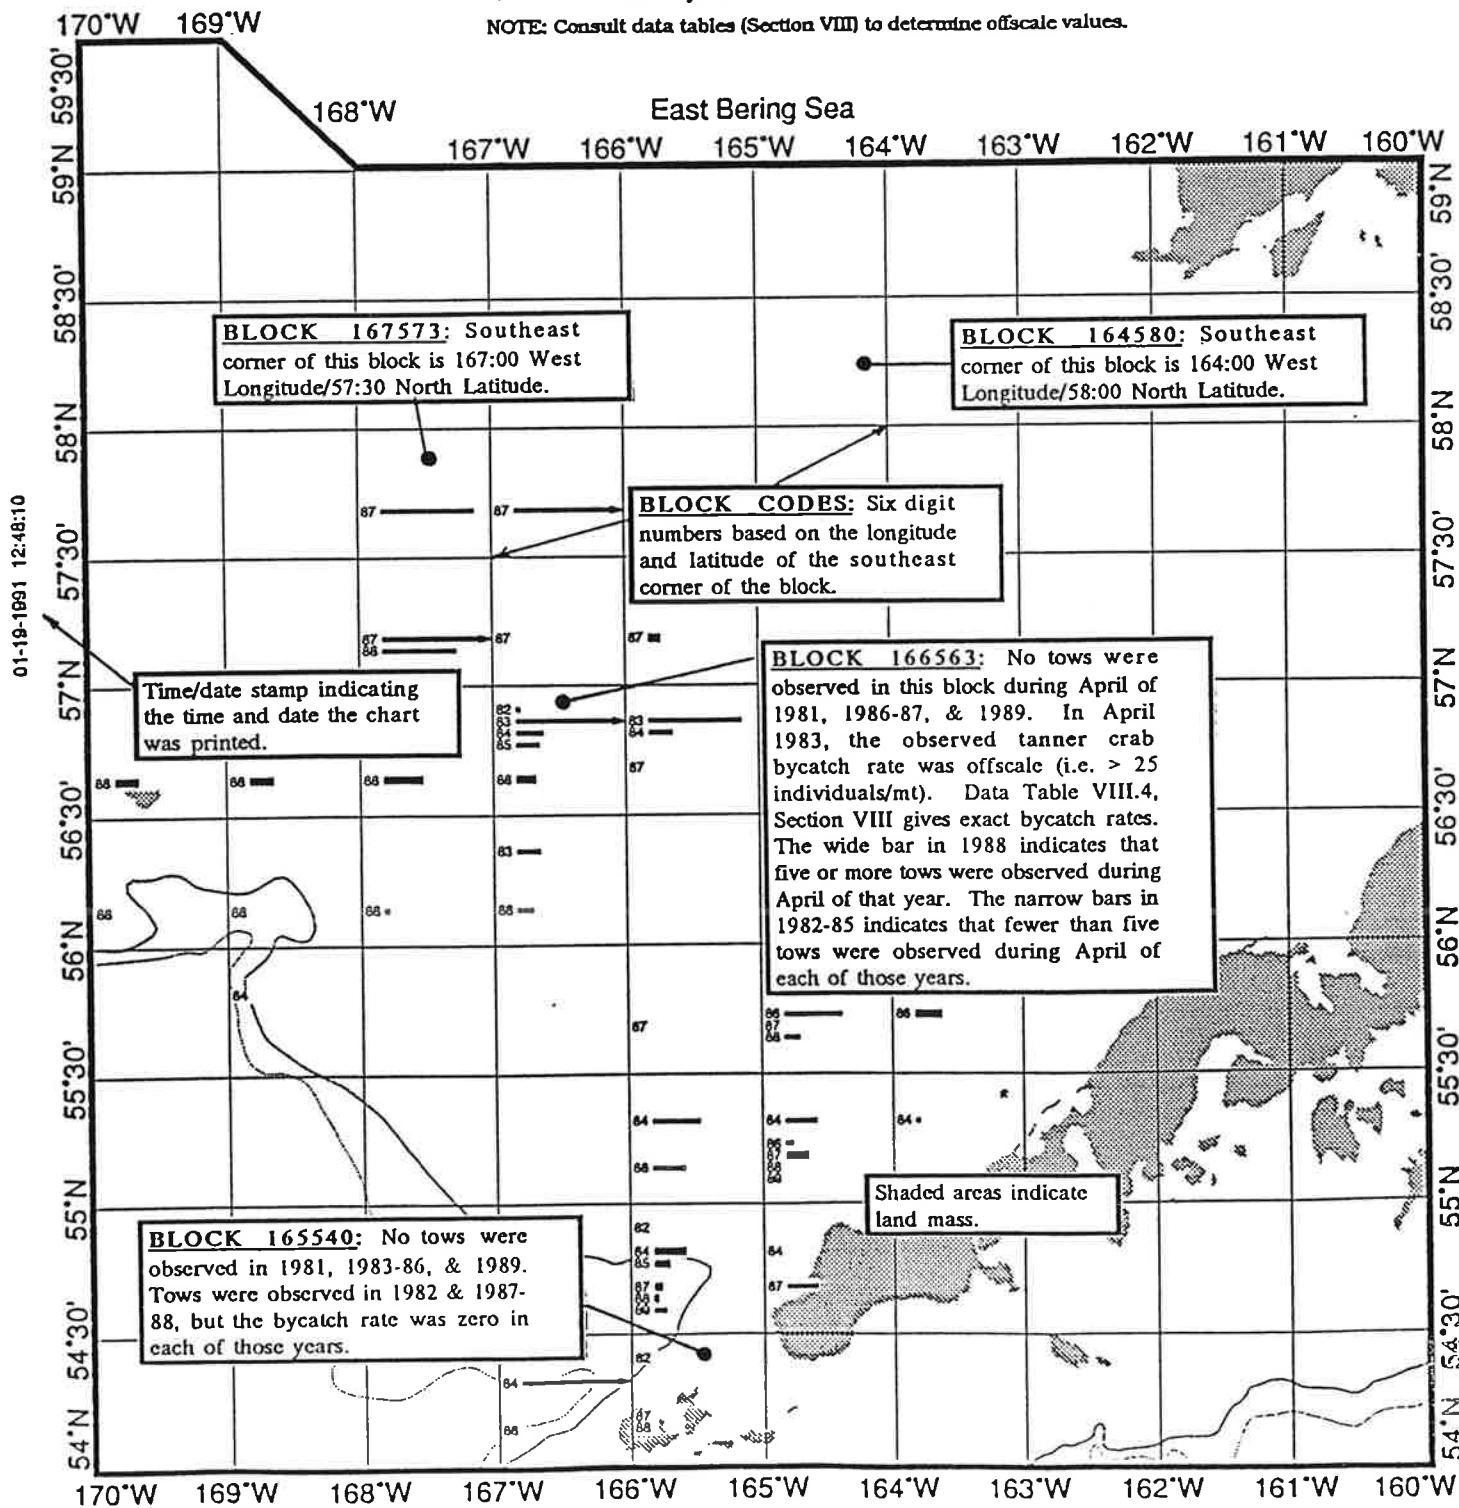

Figure I.2. Illustration of how to interpret a Bycatch Rate chart.

## SECTION II

### SUMMARY TABLES

#### Code definitions for Tables II.9-II.17.

**Mo:** The month in which the tows were observed.

**Block:** Six digit number in which the first and last three digits identify the longitude and latitude of the southeast corner of the one-half-by-one-degree block, respectively. For example, the block code 165553 identifies all tows made within the block whose southeast corner lies at 165:00 West longitude and 55:30 North latitude. Blocks lying west of 180:00 longitude (i.e., those identified by East longitude) have longitude codes appropriately greater than 180. For example, the block code 185540 identifies all tows made within the block whose southeast corner lies at 175:00 East longitude and 54:00 North latitude.

**Yr:** The year in which the tows were observed.

**Total Observed Catch (mt):** Total catch in metric tons (including prohibited species) from tows observed within the given Month/Block/Year.

**Pollock Observed Catch (mt):** Pollock catch in metric tons from tows observed within the given Month/Block/Year.

**(%):** The percentage of the total observed catch that was pollock (i.e., Pollock Catch/Total Catch).

**Total CPUE (mt/hr):** Total catch in metric tons (including prohibited species) divided by the total number of hours towed. N/A indicates CPUE data were not available.

**Total CPUE (mt/tow):** Total catch in metric tons (including prohibited species) divided by the total number of tows. N/A indicates CPUE data were not available.

**Hal Bycatch Rate:** Halibut catch in metric tons divided by total catch (including prohibited species) in metric tons, expressed as a percentage (i.e., times 100).

**Her Bycatch Rate:** Herring catch in metric tons divided by total catch (including prohibited species) in metric tons, expressed as a percentage (i.e., times 100).

**KC Bycatch Rate:** King crab catch in numbers divided by total catch (including prohibited species) in metric tons.

**TC Bycatch Rate:** Tanner crab catch in numbers divided by total catch (including prohibited species) in metric tons.

**Tows:** Number of tows observed within the given Month/Block/Year. If fewer than five tows were observed, "<5" is given rather than the exact number to preserve the confidentiality of the data.

## SECTION VIII

### DATA TABLES

#### Code definitions for data tables in this section.

**Block:** Six digit number in which the first and last three digits identify the longitude and latitude of the southeast corner of the one-half-by-one-degree block, respectively. For example, the block code 165553 identifies all tows made within the block whose southeast corner lies at 165:00 West longitude and 55:30 North latitude. Blocks lying west of 180:00 longitude (i.e., those identified by East longitude) have longitude codes appropriately greater than 180. For example, the block code 185540 identifies all tows made within the block whose southeast corner lies at 175:00 East longitude and 54:00 North latitude.

**Yr:** The year in which the tows were observed.

**Total Observed Catch (mt):** Total catch in metric tons (including prohibited species) from tows observed within the given Month/Block/Year.

**YFin Observed Catch (mt):** Yellowfin sole catch in metric tons from tows observed within the given Month/Block/Year.

**(%):** The percentage of the total observed catch that was yellowfin sole (i.e., Yellowfin Sole Catch/Total Catch).

**Total CPUE (mt/hr):** Total catch in metric tons (including prohibited species) divided by the total number of hours towed. N/A indicates CPUE data were not available.

**Total CPUE (mt/tow):** Total catch in metric tons (including prohibited species) divided by the total number of tows. N/A indicates CPUE data were not available.

**Hal Bycatch Rate:** Halibut catch in metric tons divided by total catch (including prohibited species) in metric tons, expressed as a percentage(i.e., times 100).

**Her Bycatch Rate:** Herring catch in metric tons divided by total catch (including prohibited species) in metric tons, expressed as a percentage (i.e., times 100).

**KC Bycatch Rate:** King crab catch in numbers divided by total catch (including prohibited species) in metric tons.

**TC Bycatch Rate:** Tanner crab catch in numbers divided by total catch (including prohibited species) in metric tons.

**Tows:** Number of tows observed within the given Month/Block/Year. If fewer than five tows were observed, "<5" is given rather than the exact number to preserve the confidentiality of the data.
